

## Why we do that?

Plenty of research and official reports show that if children are not attaining minimal social and emotional skills (SES) at around six years of age, they are likely to be at risk in the next stages of their development. Well-developed SES in children contribute to academic success, improve learning conditions, are a powerful tool for empowering children for a better future, for a happier and more productive life, but also they are an irreplaceable tool for prevention of social exclusion, aggression and bullying, school dropout, different types of risk behaviors, psychopathology, unemployment, etc.

## What will we change?

EU-Self Project aims to an innovative approach by linking the knowledge and practice in the field of early childhood social and emotional skills development. Nine partners from six counties work on inputs from which researchers, teachers, educators, decision making bodies, national and/or local authorities, parents, etc., can benefit.
